

**Science Knowledge and Skills: Predicting
the Ice Won't Melt If**

Teacher: This ice will be here tomorrow? Do you think it'll be here tomorrow?

Girl: No.

Teacher: You don't think so?

Girl: Because it's going to melt.

Teacher: It's going to melt? It's going to melt today?

Girl: The whole thing.

Teacher: The whole thing is going to melt? Then it's probably not cold enough outside. Because it has to be really, really cold outside so it can stay, stay like that, to stay into a block of ice. It has to be really cold.

Girl: But you can—you can take it inside and save it.

Teacher: We can take it inside? Where are we going to take it inside? Where?

Girl: Put it in a bag or something.

Teacher: Put it in a bag? If we put it in a bag, it's going to save it?

Girl: Yeah.

Teacher: Yeah? You think so? We should try that.

Girl: Yeah.

Teacher: We should try that.

Girl: Yeah, because the sun don't melt it.

Teacher: So the sun won't melt it. But if we leave it in the classroom, you think it won't melt if we leave it inside? Oh, okay. Well, we can—I'll put it in a bag.
