"MYTH"

> popular **belief** or tradition that has grown up around something or someone; a **belief** that embodies the ideals and institutions of a society or segment of society

> an unfounded or false notion or **belief**
MYTHS MATTER

myths shape decisions

pessimistic myths about dual language learning result in impoverished learning environments for children
Why talk about dual language learning?

► linguistic reality – many children in Early Head Start and Head Start programs speak other languages at home and will learn English (and their home language) during the pre-school years – DUAL LANGUAGE LEARNERS

► designing effective programs for them requires an understanding of early dual language learning

I will talk a lot about dual language learning and dual language learners

- but, I am not advocating that all programs be bilingual
- some might focus on home language; some on English; some on both home language and English
MY GOALS

▸ to review research findings on a number of common myths that surround dual language learning

▸ to describe the implications of this research for dual language learners and their caregivers in HS & at home

▸ to talk about appropriate learning environments for dual language learners – whether your program is home language-only, English-only; or bilingual
CAVEAT 1: THE MAGIC MODEL

- there is not one best model for all sites

- the program model that is optimal for one community is not necessarily optimal for another community

- young children are resourceful and powerful learners

- equally positive developmental outcomes can be achieved via different models
THE “BEST” PROGRAM MODEL

- reflects:
  - Head Start Program Performance Standards
  - local goals and motivations
  - state and local regulations
  - realities about local population
  - local resources, including personnel
  - other... history, future
CAVEAT 2: 
RESEARCH HAS ALL THE ANSWERS

- research does not have all the answers
- researchers have studied only a few of the issues
- the issues they have studied are often not the same as the issues practitioners face

professional judgment is always necessary
IMPLICATIONS

1. Early/Head Start leaders have a key role to play in collecting, analyzing and applying information to build effective local programs:
   - information about the community; individual children’s backgrounds; parental history of education; community goals; etc

2. Early/Head Start leaders have a role to play as local “action researchers”

3. Early/Headstart leaders have the responsibility to stay informed about current relevant research and best practices:
   - discussion/reading groups
   - invited local experts
   - electronic network to share expertise
MYTHS

1. Early dual language learning leads to delays, deficits, and confusion

2. Bilingual code-mixing is a sign of confusion

3. Young children are linguistic sponges

4. More exposure to English the better & the earlier the better

5. I only know English – so I can’t support dual language development
MYTH 1: EARLY DUAL LANGUAGE LEARNING RESULTS IN DELAYS, DEFICITS & CONFUSION

LA TIMES (OCT, 7, 2002)
THE EVIDENCE SPEAKS WELL OF BILINGUALISM’S EFFECT ON KIDS
Judy Foreman
Lecturer, Harvard Medical School

“Kids who grow up in bilingual homes may be slower to speak than other kids, but once they’ve learned both languages, they appear to have a number of intellectual advantages”
MYTHS of the MONOLINGUAL BRAIN

- human brain is monolingual at birth
- it treats input from two languages as one language
  - takes children longer to sort out two languages
  - acquiring more than one language in infancy or early childhood challenges neuro-cognitive capacity
REALITY

- dual language learning is not a cognitive challenge for most children
- human brain is able to learn two languages as easily as one
- monolingual children get more input than they need to acquire language -- there is room left over
- successful dual language learning depends on the quality of the learning environment --- more later...
EVIDENCE:
MONOLINGUAL MILESTONES

- Word segmentation (7 mths)
- Babbling (10-12 m)
- First words (12 mths)
- Vocabulary spurt (18 mths)
- Word combination (24 mths)
- Grammar/communication (beyond)

Bilingual milestones are the same
DIFFERENCES...

a) vocabulary – bilingual children usually have smaller vocabularies in each language in the beginning

► but, when conceptual vocabulary in both languages is combined, bilingual children are usually the same as monolinguals

► differences are probably due to input – context-dependent nature of word learning

b) patterns of use may reflect community norms – a difference not a deficit
CHILDREN WITH LANGUAGE IMPAIRMENT

- studies of Spanish-English bilinguals with language impairment in the U.S.* and of French-English bilinguals with language impairment in Canada*:  
  - bilingual children had impairment in both languages  
  - bilingual children had same kinds of language problems as monolingual children with impairment  
  - bilingual children had same severity of language problems in each language as monolingual children  
  - children with impairment were bilingual

* Gutierrez-Clellen & Wagner (2006)
♂ Paradis, Crago, Genesee, & Rice (2003)
COGNITIVE ADVANTAGES of BILINGUALISM

► BIALYSTOK (2004/2007)

- executive functions of the brain
- focus on relevant task information, screen out irrelevant information
- a result of managing 2 languages
- persists into adulthood

Bilingualism keeps the brain in shape

Two important benefits of French immersion and bilingualism have not received sufficient publicity. The first is based on the work of Ellen Bialystok of York University. She has shown that children who grow up with more than one language develop better problem-solving skills and are better at multi-tasking.

The second advantage has to do with Alzheimer’s disease. Dr. Serge Gauthier, director of the Alzheimer Disease Research Unit at the McGill Centre for Studies in Aging, has pointed out that using your brain more could delay the onset and the severity of this disease. Bialystok has shown that slowing down of cognitive processes is not as fast for bilingual people.

The message is clear. Being bilingual might be the best way to keep your brain in tip-top shape.
IMPLICATIONS

1. expect dual language (DL) learners to be different from monolingual children (because they are bilingual)

2. do not assume that the differences they exhibit are signs of problems

3. enrich the language learning environments of DL learners to minimize differences – DL children need more enrichment, not less

4. promote dual language learning in order to promote the advantages of bilingualism ....
MYTH 2: CODE-MIXING

The Myth
code-mixing is a sign of confusion and lack of mastery of one or both languages

Reality
bilingual code-mixing is a linguistic & communicative resource:
  o DL learners use their 2 languages appropriately
  o they code-mix to fill gaps in their proficiency
  o their code-mixing is grammatical
dual language learners code-mix to fill gaps

Wayne

Felix

- Translation Equivalent
- No Translation Equivalent
Dual language learners code-mix because it is a social norm in their communities.

Spanglish, a mixture of Spanish and English, is moving into U.S. mainstream. There are even Hallmark cards in it.
Child Bilingual Code-Mixing is Grammatical

e.g. 1: “quiero mas juice” [I want more juice] ✓

e.g. 2: “vamos outside” [let’s go outside] ✓

e.g. 3: “tengo horsie” [I have the horsie] ✓

e.g. 4: “it quiero” [I want it] ✗
IMPLICATIONS

1. do not worry if DL learners use both languages at the same time or in the same utterance

2. do not insist that they separate their two languages; they will learn to separate them over time

3. the one-person/one-language rule: useful to ensure that children get enough exposure to both languages, but children do not need it to keep their languages separate

4. do not engage in simultaneous translation as a compensatory strategy

5. E/HS personnel can mix too -- to enrich & to provide positive dual language role models
MYTH 3: LINGUISTIC SPONGES

The Myth
children soak up language like a sponge; you just have to talk to them and they learn automatically

Reality
- Yes and NO

⇒ yes: children are more successful language learners than adults
BUT....

- there are wide (innate) individual differences in rates of language learning – especially second language learning
- language learning takes time
- child’s language competence also depends critically on the quality of the learning environment:
  - language for social communication
  - language for thinking and literacy
CONVERSATION WITH A 7-YEAR-OLD ELL

- E: So, what grade are you in, in school?
- C: two
- E: Wow! Grade 2. What’s your teacher’s name?
- C: Mrs. Munro
- E: What’s the name of your school?
- C: Lendrum
- E: I’ve heard of that school. Do you like school in Canada?
- C: Yeah, oh yeah

⇒ day-to-day conversation requires limited vocabulary and grammar skills
ENRICHED LANGUAGE INPUT  ➔  ENRICHED LANGUAGE COMPETENCE

► oral language skills in early childhood in the home language lay the foundation for later literacy development & academic achievement:

- for example,
  - metalinguistic awareness
  - letter-sound knowledge
  - print-related knowledge – books, reading, writing
  - depth and breadth of vocabulary
  - language for reasoning
IMPLICATIONS:
use games to build vocabulary and conceptual skills
using language to build literacy skills

- read with infants and toddlers
- look at picture books together
- create a print-rich environment
- engage children in rhyming and alliteration through games/songs
- use varied vocabulary to enrich the children’s vocabulary
- use language to explain and encourage analytic thinking

use developmentally-appropriate activities
using language to build cognitive abilities

- to label objects, actions, relationships, concepts: building conceptual skills
- to learn numbers: building math readiness
- to sequence: developing logical thinking
- to compare: building critical thinking skills: *more than, bigger/smaller than, better than...*
- to explain: building analytic thinking skills e.g., "because"; "when-then"; "if-then"
- to predict: building reasoning skills
- to narrate: building complex language skills – relational terms -- then, after, before....
use everyday experiences to develop language & cognitive skills
implications for parents...

- encourage parents to use the home language to ensure full communication, socialization, strong parenting, and respect for home language and culture.

- create activities for parents to use at home so they can enrich their children’s language competence:
  - book activities (wordless books)
  - audio-cassettes to encourage talk and enriched language use
  - word games in the home language
  - rhymes & songs

- parent workshops on how to enrich language use at home
MYTH 4: MORE & EARLIER IS BETTER

The Myth
★ the more exposure to English, the greater the competence
★ the earlier the exposure to English, the better
★ minority language children should learn English ASAP

Reality
- time does not matter much for English
- time does matter for minority languages

WHY?
strong HOME language skills facilitate the acquisition of English – **BOOTSTRAPPING**

cross-linguistic facilitation is strongest in areas related to literacy and academic performance – using language to read, think critically, and problem solve, tell stories….

cross-linguistic facilitation starts in the pre-school years
COMMON UNDERLYING PROFICIENCY
(from Cummins, 2000)
ACADEMIC ADVANTAGES of BILINGUALISM

Bilingual students in K-12 school programs:

- are more likely to close the achievement gap with English-L1 students

- have higher grades, lower transiency rates, and are more likely to be on track with high school credits than ELLs with lower levels of L1 proficiency

- have higher levels of achievement in English reading and math than students with low levels of bilingual proficiency
IMPLICATIONS

- support development of child’s home language
- encourage parents to use home language
- provide parents & other volunteers with guidance on how to enrich their use of the home language

CREATE AN ADDITIVE DUAL LANGUAGE LEARNING ENVIRONMENT
additive view of bilingualism

Mi Nanny, Mi Teacher
Immigrant Care Givers Double as Language Instructors

L. NAVARRO

When he first spoke, he said "every" and "vacuum," among many others.

The words also included "bonito" (pretty), a Salvadoran word he learned from his parents.

Ana López, does not speak English very fluently, but she is able to communicate with many other people in the neighborhood.

Her experience as a nanny and a language instructor has helped her improve both her English and her ability to communicate with children.

Ana López is a good example of how bilingualism can be an asset in today's society.
Hispanics threaten U.S. melting pot

Immigrants must learn English or country will suffer in long run

Since the United States established itself as an English-speaking country, never has an immigrant group so threatened the “melting pot” concept.

In his book *Empires of the Word*, Nicholas Ostler argues English became the dominant language of the United States in large part because English-speaking colonists were far more likely to arrive in families than colonists from other parts of Europe.

Consequently, their numbers grew more rapidly than, say, those of the French, whose fur-trading *coureurs de bois*
additive bilingual environment is critical

- social psychological reasons:
  - cultural double bind
  - Native American language/cultural preservation & revitalization

- psycholinguistic reasons:
  - cross-language facilitation

- “educational” reasons:
  - a matter of expectations
MYTH 5: “I ONLY KNOW ENGLISH, SO I CAN’T SUPPORT DUAL LANGUAGE DEVELOPMENT”

NONSENSE!

There’s lots you can do....
Creating a positive learning environment for dual language learners

Suggestions for supporting home language development:

- Promote an attitude of additive bilingualism
- Provide key services in main home languages when working with parents
- Encourage parents to use home language and provide guidance on how to enrich home language – enlist community volunteers to do this
- Call on older children to serve as bilingual experts – bilingual models
- Learn and use a few salient words in most common home languages – child-friendly words and expressions
- Include parents and volunteers who speak home languages to participate — provide training
- Enlist community groups that offer services in other languages
to create an additive dual language environment, you need a plan:

- when?
- who?
- what?
- developmental issues
KIDS CAN DO IT!

CAN WE?
